

1 / Add an error message to check if license file is not absent, or not empty:

"Veuillez vérifier votre licence ou contacter le support sur contact@dsn-tools.fr!"

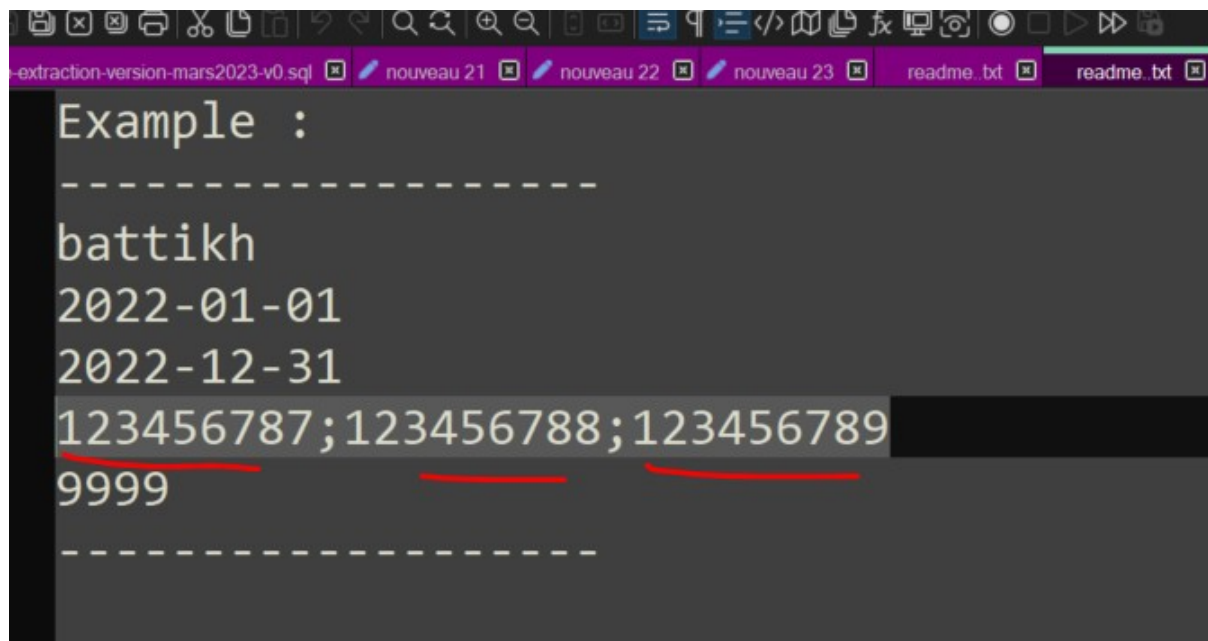

2/ If license file is wrong, replace current message error by:

"Veuillez vérifier votre licence ou contacter le support sur contact@dsn-tools.fr!"

**3/ License limitation:**

if SIREN = 99999999, shunt the control on SIREN, so the User can use all dsn files without restriction on SIREN

See example on readme.txt file, by default we have 3 SIREN: 123456787; 123456788; 123456789

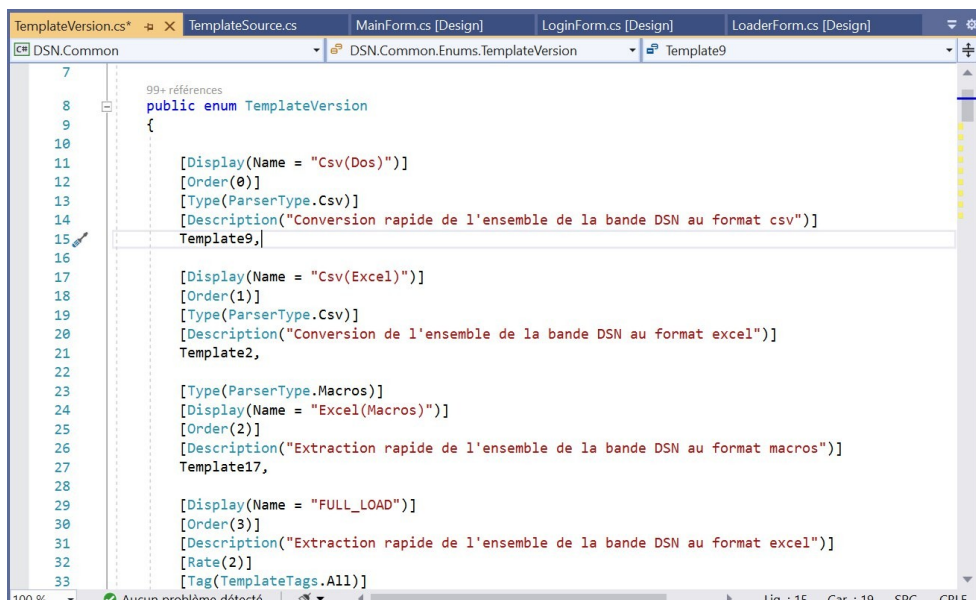

4/ Save results files on windows DOWNLOADS/dsn folder

5/ Hide tmp folder : When a template is running, the xlsx files are visible under standalone/tmp, and user can copy them. We need to hide the tmp folder, or make user unable to copy the xlsx files

AppData > Roaming > DSN Tools > Standalone

6/ Rename files rules :

We need to add new attributes to templateversion.

Example :

[Display(Name = "Données Contractuelles")]

[Order(5)]

[Rate(5)]

[Description("Données contractuelles des salariés déclarés (Bloc 40)"]

```
[Tag(TemplateTags.RH, TemplateTags.All)]  
[Type(ParserType.Macros)]  
[WebPage(WebPages.Aggregator, WebPages.Reporter)]  
[FicName("40_Données_Contractuelles")]  
[NameApp("RH : Données Contractuelles (Bloc 40)")]  
[OrderApp(2)]
```

Template6,

* FicName : new attribut to be used to give the name of the xlsx extraction file (in both WEB and DESKTOP app's)

=>the file name will be : XXX_FicName_yyyymmddhhmiss.xlsx

XXX is the module name (REP, AGR or CTL)

Example : REP_40_Données_Contractuelles_20221112120202.xlsx if the template6 is launched in REPORTER

* NameApp : is the label of the template displayed in the Desktop app, instead of display.name attribute used in the web app.

* OrderApp will be used in the Desktop app to order the list of templates in dplTemplates.DataSource
